

**Dedicated to saving
you time and money
on every load.**

*5800 Series Truck Scale
Available in chrome or black
2-inch diameter*

A Low Cost Solution for Dedicated Fleets and Owner-Operators.

Fleets and Owner/Operators with dedicated rigs can now enjoy the benefits of Air-Weigh at an even lower cost. With the Dedicated Tractor-Trailer Scale you get all of the features and functions of a complete Air-Weigh Tractor-Trailer System except for automatic trailer swapping.

The Industry's Most Affordable and Accurate Tractor-Trailer Scale.

The Air-Weigh Dedicated Tractor-Trailer Scale is an affordable load management system that is permanently installed in the dash and calibrated to each suspension on the vehicle. By running the trailer suspension air line to the dash, there's no need for a separate trailer scale. With no operator interaction required, the in-dash gauge automatically shows the steer, drive, and trailer weights on one screen. A single button press displays GVW and Net Payload weights. A 12V alarm output is standard and allows connection of an in-dash or exterior light or buzzer to warn of near-legal weight limit or over-legal weight on any axle or GVW.

What Can an Air-Weigh Scale do for You?

Air-Weigh On-Board Scales give you the capability to weigh as you load, eliminating all the costs associated with leaving the loading site under or overweight. In addition, there will be no more:

- Wasted HOS time
- Missed delivery schedules
- Waiting to re-work the load
- Wasted out-of-route miles
- Overweight fines
- Wasted fuel
- Scale Fees

**More Accurate, More
Reliable Than Air Gauges
Calibration PIN Protected
3-Year Limited Warranty**

Self-Weighing Trucks and Trailers™

Easy to Install!

Run an air line from the tractor and trailer airbags to the dash. You can purchase the air line and fittings from Air-Weigh if needed. Install Air-Weigh sensors onto the air lines. Connect cables from the sensors to the tractor ComLink. Mount the display in-dash and the Com-Link behind the dash. Connect to power, and you are ready to calibrate your Air-Weigh Scale.

Easy to Calibrate!

Air-Weigh's simple on-screen menu makes it easy to setup and calibrate your scale. Calibration is as simple as selecting the CALIBRATION menu, then entering the empty weights when the vehicle is empty and entering the heavy weights when the vehicle is loaded. Once the system is calibrated, steer, drive, trailer(s), GVW and net payload weights will be displayed on the 2-inch in-dash display.

Easy to Operate!

To weigh most accurately, the vehicle should be parked on a level surface with the engine running and the brakes released. The height control valve should be in good repair and set at factory-specified ride-height. The suspension should be briefly deflated, then allowed to return to ride-height with the brakes released. When the numbers stabilize, weight to within 300 lbs of a DOT scale will be displayed (many Air-Weigh customers claim accuracy within 100 lbs. with a little practice).

Easy to purchase!

Just call Air-Weigh for assistance in specifying the correct kit for your application at 888-453-3444 or send an email to Sales@Air-Weigh.com. You can also order through dealers nationwide. See www.Air-Weigh.com for a dealer near you.

Air-Weigh has a Dedicated Tractor-Trailer Scale System for You!

The Air-Weigh Dedicated Tractor-Trailer Scale is designed to operate on most tractors with air-ride drive axles using dual or single leveling valves, tandems or tridems and spring or air-ride steers. Air-Weigh works with air-ride trailers using single or dual leveling valves, tandems, tridems or spread axles. Air-Weigh Dedicated Tractor-Trailer Scale kits are also available for many multiple-trailer combinations including B-trains, super-B's, connector dollies and pups.
